

10/31

- AJ went over what we set up in the lab, as well as our upcoming meeting tomorrow. We went over wireframes and general website structure.
 - We need to add a wireframe for profile page, just having the generate joke page is not enough content.
 - Next week's lab will focus on APIs and test cases: We should have everything for last week's lab done, a basic plan on who does what, and how we're gonna go about initial implementation.
